# Unlocking AI Tutor's Potential:
A Student Interaction Guide

While learning to use AI responsibly in the classroom can sometimes feel overwhelming, it has the potential to be an incredibly valuable tool when used thoughtfully. Hawkes Learning's **AI Tutor** is designed to work alongside you as you navigate through practice questions. This personal tutor references content from your Hawkes title, ensuring that you get accurate responses that are consistent with the materials your instructor selected.

Don't know how to begin using **AI Tutor**? Below are some real-life examples and prompts to start the conversation!

1. You don't know where to start.

   "I am totally lost. Can you help me?"

2. You need help understanding the basic elements of a concept.

   "Can you break this down in simpler terms?"

3. You learn well by talking things out.

   "I'd like to understand this concept even more. Can you elaborate on this?"

4. You want to see a math problem broken down into parts.

   "Can you walk me through each step of this problem?"

5. You'd like to understand how the concept is relevant to the world around you.

   "Can you offer real-world examples of this?"

6. You'd like to understand how the concept is relevant to your current or future career path.

   "Can you connect this to my future career field in [X]?"

7. You want to verify if your understanding of a concept is correct.

   "Are you saying that…"

8. You're curious how one topic relates to another.

   "Can you explain how [X] compares to [Y]?"

9. You want to know if your own original example of something is accurate.

   "Can you tell me if this example is right? …"

10. You're still feeling frustrated because you're struggling to understand.

    "I am really frustrated. How can you help me?"
